PLAN & PROFILE SHEET
SHEET 1 OF 1

ALL PROJECT COORDINATES HAVE BEEN PROJECTED FROM THE MISSOURI STATE PLANE COORDINATE (SPC) SYSTEM OF 1983 USING AN AVERAGE PROJECT PROJECTION (GRID TO GROUND) FACTOR. TO GET BACK TO STATE PLANE COORDINATES MULTIPY THE PROJECT COORDINATES BY THE AVERAGE GRID FACTOR AS SHOWN IN THE "REFERENCE CONTROL INFORMATION" PORTION OF THIS TABLE.

PROJECT COORDINATE INFORMATION

COORDINATE SYSTEM	MODIFIED STATE PLANE (GROUND)
HORIZONTAL DATUM	NAD83(2011) EPOCH 2010.0
VERTICAL DATUM	NAVD88: GNSS DERIVED
GEOID MODEL	18
ELEVATIONS DETERMINED BY	DIFFERENTIAL LEVELING/ GPS-MODOT VRS
PROJECT PROJECTION FACTOR	1.000061295

REFERENCE CONTROL INFORMATION

COORDINATE SYSTEM	MO COORDINATE SYSTEM OF 1983
CONTROL STATION	MISSOURI CORS
DESIGNATION	MODOT EDINA CORS ARP
CORS_ID	MOED
PID	DM4674
LATITUDE	40 11 11.65651 N
LONGITUDE	092 10 30.28768 W
NORTHING (M)	483,213.886
EASTING (M)	527,668.699
ZONE	CENTRAL
PROJECT AVERAGE GRID FACTOR	0.9999387045

EXAMPLE OF PROJECT COORDINATE TO S.P.C.

PROJECT NORTHING X AVERAGE GRID FACTOR
= STATE PLANE NORTHING
PROJECT EASTING X AVERAGE GRID FACTOR
= STATE PLANE EASTING

EXAMPLE: CONTROL POINT # GPS 1
N 1448133.97107962 X 0.99992096855 = N1448019.532
E 1762047.65317177 X 0.99992096855 = E1761908.407

NOTES:

INSTALL PRE-CLOSURE SIGNS WITH PLAQUES (48A) A MINIMUM OF 2 WEEKS PRIOR TO CLOSURE.

WHEN BRIDGE CLOSURE OCCURS - REMOVE SPECIAL SIGN PLAQUES AND RELOCATE NOTED SIGNS.

SEE TRAFFIC CONTROL SHEET 2 OF 2 FOR SPECIAL SIGN AND PLAQUE DETAILS FOR (48A) (48B) (48C).

✳ LOCATE SIGNS 100'FROM BRIDGE OR INTERSECTION.

USE IN PLACE ALL SIGNS WHICH DO NOT CONFLICT WITH THIS PLAN. COVER OR REMOVE CONFLICTING SIGNS.

PLACE ALL SIGNS AS SHOWN OR AS DIRECTED BY THE ENGINEER.

Indicates location of borings.

Notice and Disclaimer Regarding Boring Log Data

The locations of all subsurface borings for this structure are shown on the plan sheet for this structure. The boring data for all locations indicated, as well as any other boring logs or other factual records of subsurface data and investigations performed by the department for the design of the project, are shown on Sheets No. 29 thru 34 and may be included in the Electronic Bridge Deliverables. They will also be available from the Project Contact upon written request. No greater significance or weight should be given to the boring data depicted on the plan sheets than is given to the subsurface data available from the district or elsewhere.

The Commission does not represent or warrant that any such boring data accurately depicts the conditions to be encountered in constructing this project. A contractor assumes all risks it may encounter in basing its bid prices, time or schedule of performance on the boring data depicted here or those available from the district, or on any other documentation not expressly warranted, which the contractor may obtain from the Commission.

Notes:

* Existing Bridge No. S0393 to be removed per Standard Specifications.

Roadway fill shall be completed to the final roadway section and up to the elevation of the bottom of the concrete beam within the limits of the structure and for not less than 25 feet in back of the fill face of the end bents before any piles are driven for any bents falling within the embankment section.

For General Notes, Location Sketch, Hydrologic Data, Foundation Data, Estimated Quantities and Estimated Quantities for Slab on Steel, see Sheet No. 2.

JEFFERSON CITY, MO 65102
1-888-ASK-MODOT (1-888-275-6636)

VEENSTRA & KIMM INC
9788 N Ash Ave. Kansas City, Missouri 64157
816-781-6182 816-781-0643 (FAX)
Certificate of Authority No. 2002006347

General Notes:

Design Specifications:

2020 AASHTO LRFD Bridge Design Specifications (9th Ed.)

2011 AASHTO Guide Specifications for LRFD Seismic Bridge Design (2nd Ed.) and 2014 Interim Revisions (Seismic Details)

Seismic Design Category = A

Design earthquake response spectral acceleration coefficient at 1.0 second period, SD1 = 0.094 g

Acceleration Coefficient (effective peak ground acceleration coefficient), As = 0.053 g

Design Loading:

Vehicular = HL-93
Future Wearing Surface = 35 Lb./Sq. Ft.
Earth = 120 LB./Cu. Ft.
Equivalent Fluid Pressure = 45 Lb./Cu. Ft.
Superstructure: Simply-Supported, Non-Composite for dead load.
Continuous Composite for live load.

Design Unit Stresses:

Class B Concrete (Substructure except Cast-in-Place Piles)	f'c = 3,000 psi
Class B-1 Concrete (Barrier & Cast-in-Place Piles)	f'c = 4,000 psi
Class B-2 Concrete (Superstructure, except Barrier)	f'c = 4,000 psi
Reinforcing Steel (ASTM A615 Grade 60)	fy = 60,000 psi
Structural Steel (ASTM A709 Grade 50)	fy = 50,000 psi
Welded or Seamless Steel Shell (pipe) for CIP Pile (ASTM 252 Modified Grade 3)	fy = 50,000 psi

Neoprene Pads:

Neoprene bearing pads shall be 60 durometer and shall be in accordance with Sec 716.

Fabricated Steel Connections:

Field connections shall be made with 3/4-inch diameter ASTM F3125 Grade A325 Type 1 bolts and 13/16-inch diameter holes, except as noted.

Joint Filler:

All joint filler shall be in accordance with Sec 1057 for preformed sponge rubber expansion and partition joint filler, except as noted.

Reinforcing Steel:

Minimum clearance to reinforcing steel shall be 1 1/2", unless otherwise shown.

Minimum clearance between galvanized piles and uncoated (plain) reinforcing steel including bar supports shall be 1 1/2". Nylon, PVC, or polyethylene spacers shall be used to maintain clearance. Nylon cable ties shall be used to bind the spacers to the reinforcement.

Traffic Handling:

Structure to be closed during construction.
Traffic to be maintained on other routes during construction.
See roadway plans for traffic control.

Miscellaneous:

High strength bolts, nuts and washers will be sampled for quality assurance as specified in Sec 106.

Estimated Quantities for Slab on Steel

Item		Total
Class B-2 Concrete	cu. yard	104
Reinforcing Steel (Epoxy Coated)	pound	27,870

Notes:

The table of Estimated Quantities for Slab on Steel represents the quantities used by the State in preparing the cost estimate for concrete slabs. The area of the concrete slab will be measured to the nearest square yard longitudinally from end of slab to end of slab and transversely from out to out of bridge slab (or with the horizontal dimensions as shown on the plan of slab). Payment for stay-in-place corrugated steel forms, conventional forms, all concrete, and epoxy coated reinforcing steel will be considered completely covered by the contract unit price for the slab. Variations may be encountered in the estimated quantities but the variations cannot be used for an adjustment in the contract unit price.

Method of forming the slab shall be as shown on the plans and in accordance with Sec 703. All hardware for forming the slab to be left in place as a permanent part of the structure shall be coated in accordance with ASTM A123 or ASTM B633 with a thickness class SC 4 and a finish type I, II or III.

Slab shall be cast-in-place with conventional forms or stay-in-place corrugated steel forms. Precast panels will not be permitted.

Bridge deck surface may be finished with a vibrating screed.

The contractor shall provide bracing necessary for lateral and torsional stability of the beams during construction of the concrete slab and remove the bracing after the slab has attained 75% design strength. Contractor shall not weld on or drill holes in the beams. The cost for furnishing, installing, and removing bracing will be considered completely covered by the contract unit price for Slab on Steel.

Estimated Quantities

Item		Substr.	Superstr.	Total
Class 1 Excavation	cu. yard	60		60
Removal of Bridges (S0393)	lump sum			1
Bridge Approach Slab (Minor)	sq. yard		109	109
Galvanized Cast-in-Place Concrete Piles (14 in.)	linear foot	795		795
Galvanized Cast-in-Place Concrete Piles (20 in.)	linear foot	1008		1008
Dynamic Pile Testing	each	4		4
*Dynamic Pile Restrike Testing	each	4		4
Pile Point Reinforcement	each	22		22
Class B Concrete (Substructure)	cu. yard	51.8		51.8
Slab on Steel	sq. yard		304	304
Type D Barrier	linear foot		231	231
Reinforcing Steel (Bridges)	pound	3760		3760
Fabricated Structural Low Alloy Steel (I-Beam) A709, Grade 50	pound		45,290	45,290
Slab Drain	each		14	14
Galvanizing Structural Steel	lump sum			1
Vertical Drain at End Bents	each	2		2
Plain Neoprene Bearing Pad	each		8	8
Laminated Neoprene Bearing Pad	each		16	16

All concrete between the upper and lower construction joints in the end bents is included in the Estimated Quantities for Slab on Steel.

All reinforcement in the end bents and all reinforcement in cast-in-place pile at end bents is included in the Estimated Quantities for Slab on Steel.

All reinforcement in the intermediate bent concrete diaphragms except reinforcement embedded in the beam cap is included in the Estimated Quantities for Slab on Steel.

All concrete above the intermediate beam cap is included in the Estimated Quantities for Slab on Steel.

All reinforcement in cast-in-place pile at intermediate bent is included in the substructure quantities.

Sheet metal in intermediate concrete diaphragms is subsidiary to Slab on Steel.

Structural steel shall be galvanized in accordance with ASTM A123 and Sec 1081.

Foundation Data

Type	Design Data		Bent Number 1	2	3	4
Load Bearing Pile	Pile Type and Size		CECIP 14"	CECIP 20"	CECIP 20"	CECIP 14"
	Number	ea	5	6	6	5
	Approximate Length Per Each	ft	82	88	80	77
	Pile Point Reinforcement	ea	ALL	ALL	ALL	ALL
	Min. Galvanized Penetration (Elev.)	ft	807.0	805.0	804.0	807.0
	Est. Max. Scour Depth 500 (Elev.)	ft	--	820.0	818.1	--
	Minimum Tip Penetration (Elev.)	ft	802.0	800.0	798.0	805.0
	Criteria for Min. Tip Penetration		Min. Embed	Min. Embed	Min. Embed	Min. Embed
	Pile Driving Verification Method		DT	DT	DT	DT
	Minimum Nominal Axial Compressive Resistance (MNACR)	kip	148	203	203	148
	Portion of MNACR Required at End of Initial Drive	kip	104 (70%)	142 (70%)	142 (70%)	104 (70%)
	Resistance Factor		0.65	0.65	0.65	0.65

Minimum Nominal Axial Compressive Resistance = $\frac{\text{Maximum Factored Loads}}{\text{Resistance Factor}}$

DT = Dynamic Testing

Dynamic Testing shall be performed on the first pile installed at each bent.

The test piles at End Bents No. 1 and 4 shall be driven to an end-of-initial drive resistance of approximately 104 kips, which is estimated to occur at a pile tip elevation of approximately 760 and 768 respectively. The test piles at intermediate Bents No. 2 and 3 shall be driven to an end-of-initial drive resistance of approximately 142 kips, which is estimated to occur at a pile tip elevation of approximately 750 and 764 respectively. Subsequently, pile setups and the minimum nominal axial compressive resistance shall be confirmed by a restrike test perfomed not less than 24 hours after end of initial drive.

Pile point reinforcement need not be galvanized. Shop drawings will not be required for pile point reinforcement.

Estimated Maximum Scour Depth (Elevation) shown is for verifying Minimum Nominal Axial Compressive Resistance using dynamic testing only where pile resistance contribution above this Elevation shall not be considered.

All piling shall be galvanized down to the minimum galvanized penetration (elevation).

The contractor shall make every effort to achieve the minimum galvanized penetration (elevation) shown on the plans for all piles. Deviations in penetration less than 5 feet of the minimum will be considered acceptable provided the contractor makes the necessary corrections to ensure the minimum penetration is achieved on subsequent piles.

Piles are located within the Heavy Revetment on spill slopes.

List of Drawings

Hydrologic Data

Drainage Area = 6.4 mi^2
Design Flood Frequency = 25 years
Design Flood Discharge = 2200 cfs
Design Flood (D.F.) Elevation = 830.3
Base Flood (100-year)
Base Flood Elevation = 831.5
Base Flood Discharge = 3100 cfs
Estimated Backwater = 1.5 ft
Average Velocity thru Opening = 6.8 ft/s
Freeboard (50-year)
Freeboard = 0.0 ft
Roadway Overtopping
Overtopping Flood Discharge > 4200 cfs
Overtopping Flood Frequency > 500 year
500-year Flood Elevation = 833.7

*This work will be performed at the discretion of the engineer and will be underrun if not required by the engineer.

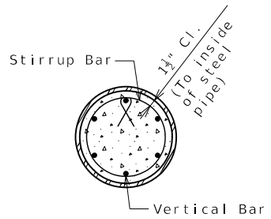
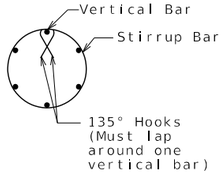
GALVANIZED CLOSED ENDED CAST-IN-PLACE (CECIP) CONCRETE PILE



SECTION A-A



DETAIL OF SEISMIC STIRRUP BAR

Galvanized Closed Ended Cast-In-Place (CECIP) Concrete Pile Data				
Bent Number	1	2	3	4
D1, CECIP Pile (O.D.)	14"	20"	20"	14"
Min. Nominal Wall Thickness	1/2"	5/8"	5/8"	1/2"
Pile Point Reinforcement	Conical	Conical	Conical	Conical
Vertical Bars	6-#5-V104	8-#6-V202	8-#6-V302	6-#5-V404
L1, Length of Vertical Bars	5'-3"	7'-3"	7'-3"	5'-3"
Upper Stirrup Bars	3-#4-P101	3-#4-P201	3-#4-P301	3-#4-P401
Lower Stirrup Bars	5-#4-P101	7-#4-P201	7-#4-P301	5-#4-P401

Notes:

Welded or seamless steel shell (pipe) shall be ASTM A252 Modified Grade 3 (fy = 50,000 psi) with physical and chemical requirements that meet ASTM A572 Grade 50. Pile certification and source material shall be required.

Concrete for cast-in-place pile shall be Class B-1.

Steel casting for conical pile point reinforcement shall be ASTM A148 Grade 90-60.

The minimum wall thickness of any spot or local area of any type shall not be more than 12.5% under the specified nominal wall thickness.

The contractor shall determine the pile wall thickness required to avoid damage from all driving activities, but wall thickness shall not be less than the minimum specified. No additional payment will be made for furnishing a thicker pile wall than specified on the plans.

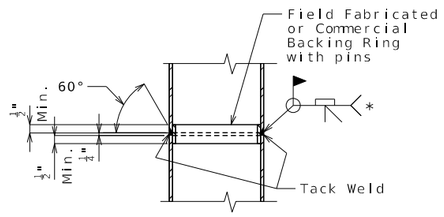
Splices of pipe for cast-in-place concrete pile shall be made watertight and to the full strength of the pipe above and below the splice to permit hard driving without damage. Pipe damaged during driving shall be replaced without cost to the state. Pipe sections used for splicing shall be at least 5 feet in length.

At the contractor's option, the hooks of vertical bars embedded in the beam cap may be oriented inward or outward.

Reinforcing steel for cast-in-place piles is included in the Bill of Reinforcing Steel.

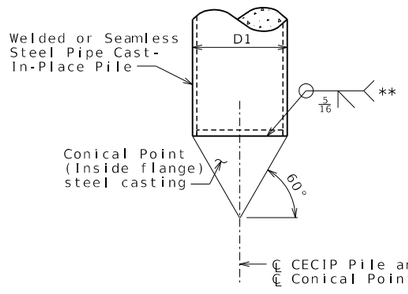
All reinforcement for cast-in-place pile is included in the estimated quantities for bents.

For Foundation Data table, see Sheet No. 2.



STEEL PIPE PILE SPLICE

* Galvanizing material shall be omitted or removed one inch clear of weld locations in accordance with Sec 702.



MANUFACTURED CONICAL PILE POINT

(Omit closure plate)

** If the conical pile point is not pre-beveled, place a 3/8" bevel at 40 degrees on the pipe.

GALVANIZED CLOSED ENDED CAST-IN-PLACE (CECIP) CONCRETE PILE

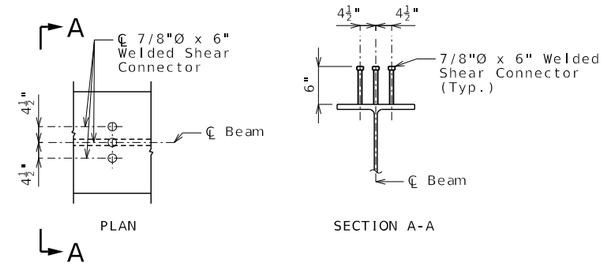
INTERMEDIATE DIAPHRAGM

NOTES:

All bolted connections shall be 3/4"Ø ASTM F3125 Grade A325 Type 1 bolts in 13/16" Ø holes.

At the contractor's option, holes in the diaphragm plate of non slab bearing diaphragms may be made 3/16" larger than the nominal diameter of the bolt. A hardened washer shall be used under the bolt head and nut when this option is used. Holes in the girder diaphragm connection plate or transverse web stiffener shall be standard size.

All structural steel shall be ASTM A709 Grade 50 and shall be galvanized in accordance with A123 and Sec 1080. Weight of all structural steel is included in the weight of Fabricated Structural Low Alloy Steel (I-Beam) A709, Grade 50.



DETAILS OF SHEAR CONNECTORS

Weight of 1,813 pounds of shear connectors for the beams is included in the weight of Fabricated Structural Low Alloy Steel (I-Beam) A709, Grade 50. Shear connectors shall be in accordance with Sec 712, 1037, and 1080.

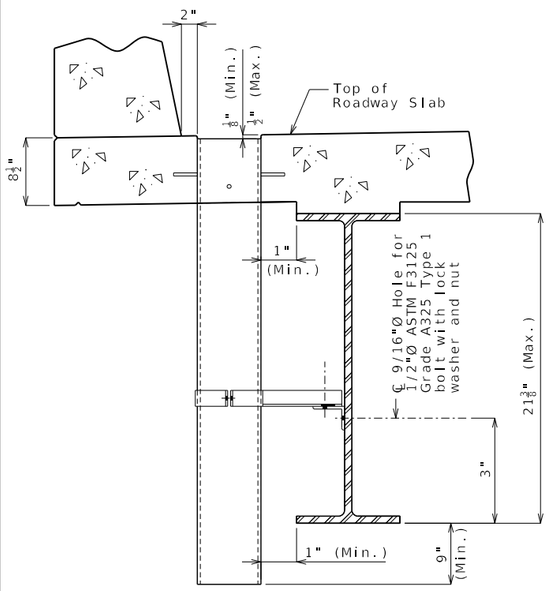
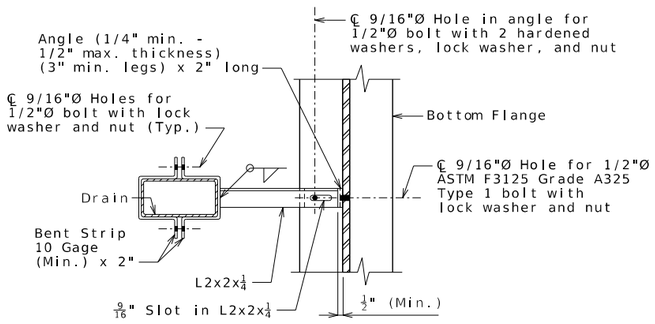
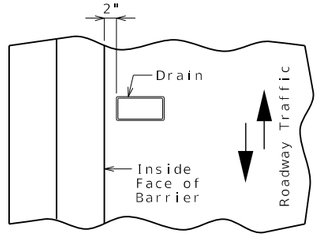
PLAN OF SLAB SHOWING SLAB DRAIN LOCATIONS



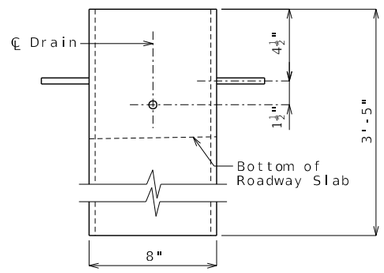
PART SECTION NEAR DRAIN



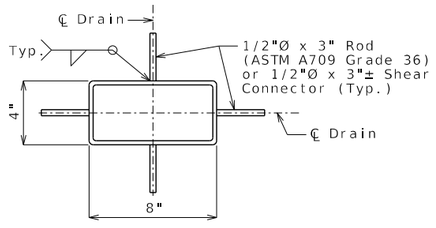
PART SECTION SHOWING BRACKET ASSEMBLY



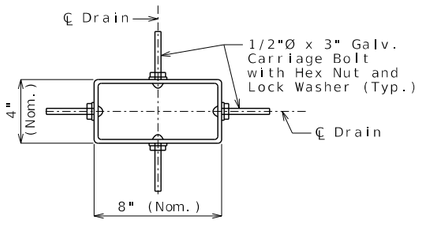
PART PLAN OF SLAB AT DRAIN



ELEVATION OF DRAIN



PLAN OF STEEL DRAIN OPTION



PLAN OF FRP DRAIN OPTION

General Notes:

Contractor shall have the option to construct either steel or FRP slab drains. All drains shall be of same type.

Slab drain bracket assembly shall be ASTM A709 Grade 36 steel.

Locate drains in slab by dimensions shown in Part Section Near Drain.

Reinforcing steel shall be shifted to clear drains.

The bracket assembly shall be galvanized in accordance with ASTM A123.

All bolts, hardened washers, lock washers and nuts shall be galvanized in accordance with AASHTO M 232 (ASTM A153), Class C.

All 1/2-inch diameter bolts shall be ASTM A307, except as shown.

Shop drawings will not be required for the slab drains and the bracket assembly.

The bolt hole for the bracket assembly attachment shall be located on the wide flange beam shop drawings.

Notes for Steel Drain:

Slab drains may be fabricated of either 1/4-inch welded sheets of ASTM A709 Grade 36 steel or from 1/4-inch structural steel tubing ASTM A500 or A501.

Outside dimensions of drains are 8" x 4".

The drains shall be galvanized in accordance with ASTM A123.

Notes for FRP Drain:

Drains shall be machine filament-wound thermosetting resin tubing meeting the requirements of ASTM D2996 with the following exceptions:

Shape of drains shall be rectangular with outside nominal dimensions of 8" x 4".

Minimum reinforced wall thickness shall be 1/4 inch.

The resin used shall be ultraviolet (UV) resistant and/or have UV inhibitors mixed throughout. Drains may have an exterior coating for additional UV resistance.

The color of the slab drain shall be gray (Federal Standard 26373). The color shall be uniform throughout the resin and any coating used.

The combination of materials used in the manufacture of the drains shall be tested for UV resistance in accordance with ASTM D4329 Cycle A. The representative material shall withstand at least 500 hours of testing with only minor discoloration and without any physical deterioration. The contractor shall furnish the results of the required ultraviolet testing prior to acceptance of the slab drains.

At the contractor's option, drains may be field cut. The method of cutting FRP slab drain shall be as recommended by the manufacturer to ensure a smooth, chip free cut.

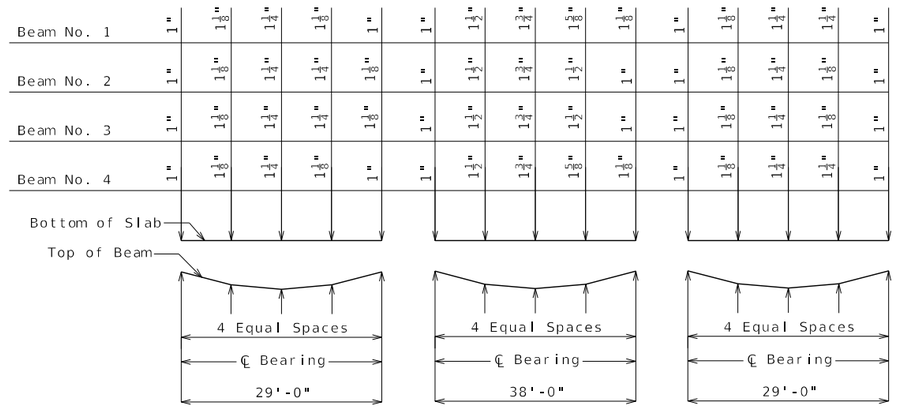
SLAB DRAINS



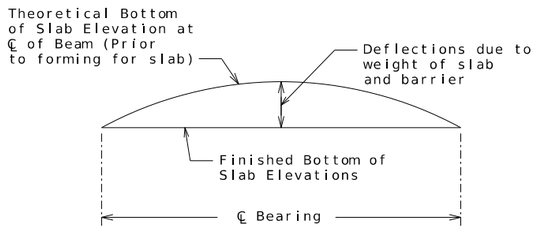
Haunching is estimated based on grade and bent elevations and Dead Load Deflection shown. If elevations or deflections in the field vary, an adjustment of the slab haunches shall be necessary in order to maintain a constant 8 1/2" slab thickness.

THEORETICAL SLAB HAUNCHING DIAGRAM (AFTER BARRIER PLACEMENT)

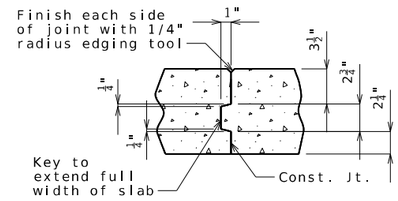
Theoretical Bottom of Slab Elevations at Centerline of Beam (Prior to forming for slab)

Beam Number	Span (1-2) (29'-0" ℄ Brg. - ℄ Brg.)					Span (2-3) (38'-0" ℄ Brg. - ℄ Brg.)					Span (3-4) (29'-9" ℄ Brg. - ℄ Brg.)				
	℄ Brg.	.25	.50	.75	℄ Brg.	℄ Brg.	.25	.50	.75	℄ Brg.	℄ Brg.	.25	.50	.75	℄ Brg.
1	832.40	832.39	832.38	832.36	832.34	832.33	832.35	832.35	832.31	832.25	832.25	832.24	832.23	832.21	832.19
2	832.53	832.53	832.52	832.50	832.47	832.47	832.49	832.48	832.45	832.39	832.38	832.38	832.37	832.35	832.32
3	832.53	832.53	832.52	832.50	832.47	832.47	832.49	832.48	832.45	932.39	832.38	832.38	832.37	832.35	832.32
4	832.40	832.39	832.38	832.36	832.34	832.33	832.35	832.35	832.31	832.25	832.25	832.24	832.23	832.21	832.19

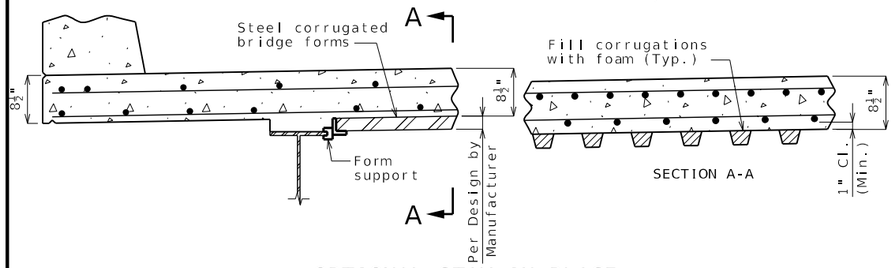
Elevations are based on a constant slab thickness of 8 1/2" and include allowance for theoretical dead load deflections due to weight of slab (including corrugated steelform) and barrier.



TYPICAL SLAB ELEVATIONS DIAGRAM



SLAB CONSTRUCTION JOINT



OPTIONAL STAY-IN-PLACE FORM DETAILS

Stay-In-Place Forms:

Corrugated steel forms, supports, closure elements and accessories shall be in accordance with grade requirement and coating designation G165 of ASTM A653. Complete shop drawings of the permanent steel deck forms shall be required in accordance with Sec 1080.

Corrugations of stay-in-place forms shall be filled with an expanded polystyrene material. The polystyrene material shall be placed in the forms with an adhesive in accordance with the manufacturer's recommendations.

Form sheets shall not rest directly on the top of beam. Sheets shall be securely fastened to form supports with a minimum bearing length of one inch on each end. Form supports shall be placed in direct contact with the top of beam. Welding on or drilling holes in the beam will not be permitted. All steel fabrication and construction shall be in accordance with Sec 1080 and 712. Certified field welders will not be required for welding of the form supports.

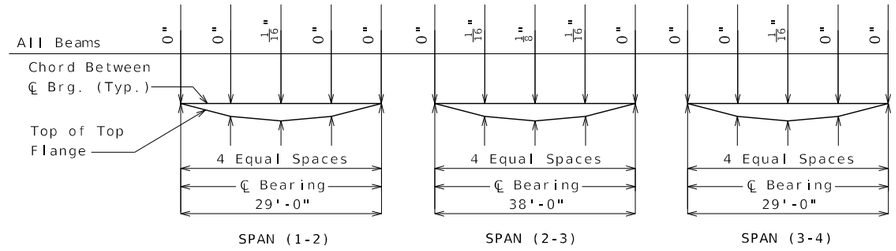
The design of stay-in-place corrugated steel forms is per manufacturer which shall be in accordance with Sec 703 for false work and forms. Maximum actual weight of corrugated steel forms allowed shall be 4 psf assumed for beam loading.

	Sequence of Pours					Min. Rate of Pour Cu. Yds./Hr.	
	Direction					With Retarder	No Retarder
Basic Sequence	1	2	3	4	5	25	25
	Either Direction						
Alternate pours to the basic skip sequence are subject to the approval of the engineer in accordance with Sec 703.							
Alternate A Pours	1	5 + 2		4 + 3		25	25
	End to 5	1 to 4		2 to End			
Alternate B Pours	1 + 5 + 2		4 + 3			25	25
	End to 4		2 to End				
Alternate C Pours	1 + 5 + 2 + 4 + 3					25	25
	End to End						

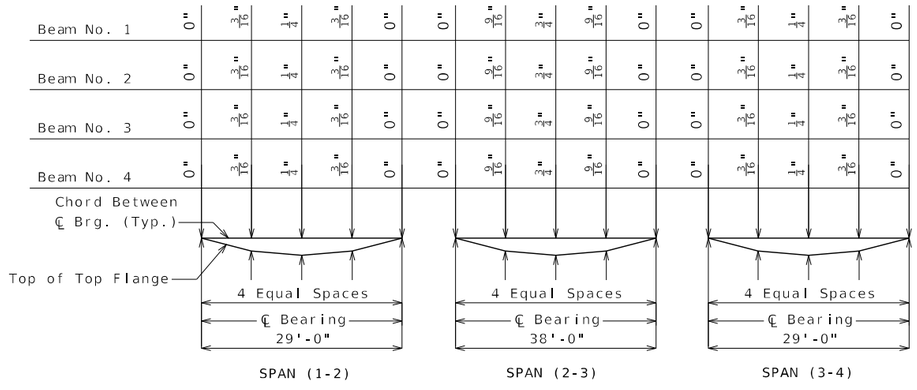
The contractor shall pour and satisfactorily finish the slab pours at the rate given. Retarder, if used, shall be an approved type and retard the set of concrete to 2.5 hours.

The concrete diaphragm below the construction joint shall be poured a minimum of 12 hours before the slab is poured.

SLAB POURING SEQUENCE



STEEL DEFLECTION



TOTAL DEAD LOAD DEFLECTION

Dead load deflection includes weight of structural steel, concrete slab, and barrier. Approximately 12% of dead load deflection is due to the weight of structural steel.

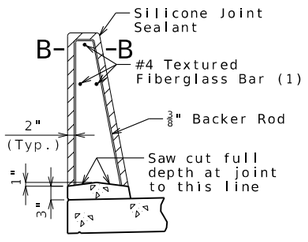
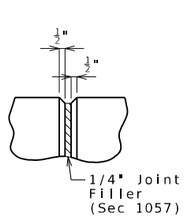
ELEVATION OF BARRIER

(Left barrier shown, right barrier similar)

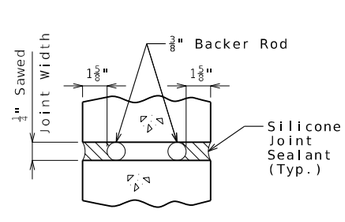
Longitudinal dimensions are horizontal.



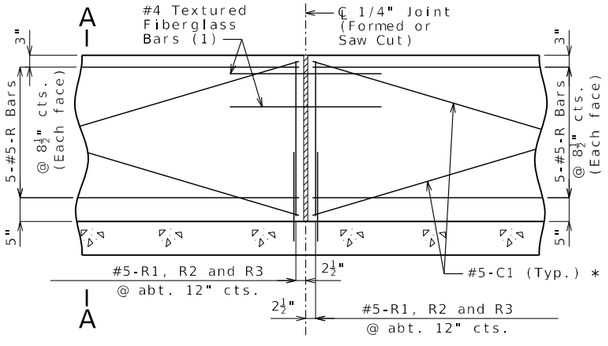
SECTION THRU
SAW CUT JOINT



PART ELEVATION
AT FORMED JOINT

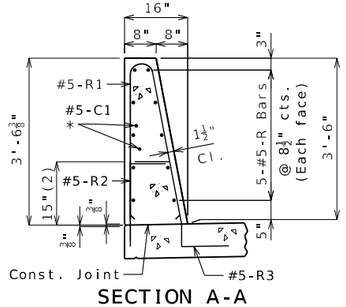


SECTION B-B



PART ELEVATION OF BARRIER

(1) Four feet long, centered on joint, slip-formed option only

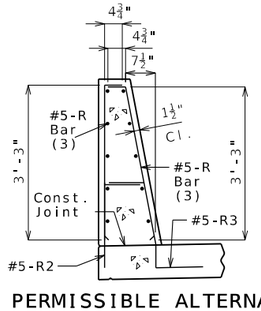


SECTION A-A

Use a minimum lap of 3'-1" for #5 horizontal barrier bars.

The cross-sectional area above the slab is 3.52 square feet.

(2) To top of bar



R-BAR PERMISSIBLE ALTERNATE SHAPE

(3) The R1 bar may be separated into two bars as shown, at the contractor's option, only when slip forming is not used. (All dimensions are out to out.)

General Notes:

* Slip-formed option only.

Conventional forming or slip forming may be used. Saw cut joints may be used with conventional forming.

Top of barrier shall be built parallel to grade and barrier joints (except at end bents) normal to grade.

All exposed edges of barrier shall have either a 1/2-inch radius or a 3/8-inch bevel, unless otherwise noted.

Payment for all concrete and reinforcement, complete in place, will be considered completely covered by the contract unit price for Type D Barrier per linear foot.

Concrete in barrier shall be Class B-1.

Measurement of barrier is to the nearest linear foot for each structure, measured along the outside top of slab from end of wing to end of wing.

Concrete traffic barrier delineators shall be placed on top of the barrier as shown on Missouri Standard Plan 617.10 and in accordance with Sec 617. Delineators on bridges with two-lane, two-way traffic shall have retroreflective sheeting on both sides. Concrete traffic barrier delineators will be considered completely covered by the contract unit price for Type D Barrier.

Joint sealant and backer rods shall be in accordance with Sec 717 for silicone joint sealant for saw cut and formed joints.

For slip-formed option, both sides of barrier shall have a vertically broomed finish and the top shall have a transversely broomed finish.

Contractor shall construct the asphalt slab. The concrete slab is not allowed.

The contractor shall pour and satisfactorily finish the bridge slab before placing the bridge approach slab.

Notes For Asphalt Slab Only:

Payment for furnishing all materials, labor and excavation necessary to construct the asphalt bridge approach slab, including tack, curb, and Type 5 aggregate base within the pay limits shown, complete in place, will be considered completely covered by the contract unit price for Bridge Approach Slab (Minor) per square yard.

Application of tack is required between lifts per Sec 403.

ASPHALT SLAB

BRIDGE APPROACH SLAB (MINOR)

Integral end bents shown, non-integral end bent similar.

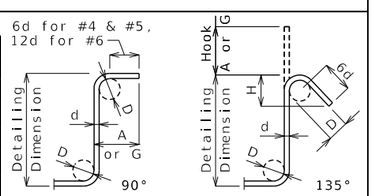
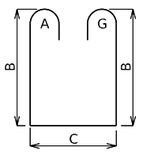
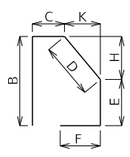
Applicable for all grades of steel.

Case 1 applies to all reinforcement. Case 2 applies to all reinforcement except for galvanized bars. Case 3 applies to galvanized bars only.





SHAPE 37S



SHAPE 38S

BENDING DIAGRAMS

All dimensions are out to out.

Shapes ending with an S shall be bent in accordance with stirrup pin bend shapes.

Unless otherwise noted, finished bending diameter D is the same for all bends of a shape.

(1) Shall be a deformed or plain spiral bar or wire.

Four angle or channel spacers are required for each column spiral. Spacers are to be placed on inside of spirals. Length and weight of column spirals do not include splices or spacers.

Nominal lengths are based on out to out dimensions shown in bending diagrams and are listed to the nearest inch for fabricator's use. Actual lengths are measured along centerline bar to the nearest inch. Weights are based on actual lengths.

For bending diagrams and steel reinforcing totals, see Sheet No. 25.

All bars shall be Grade 60.

Codes: C = Required coatings, where E = Epoxy Coated and G = Galvanized.

SH = Required shape, see bending diagrams.

V = Sets of varied bars and number of bars of each length. Bar dimensions vary in equal increments between dimensions shown on this line and the following line and the actual length dimension shown on this line and the following line vary by the specified increment.

As-Built Pile Data

Pile No.	Length in Place (ft)	PDA Nom. Axial Compressive Resistance (kips)	PDA End of Drive Blow Count (blows/in.)	Actual End of Drive Blow Count (blows/in.)	Remarks

Note:
Indicate in remarks column:
A. Pile type and grade
B. Batter
C. Driven to practical refusal
D. PDA test pile
E. Minimum tip elevation controlled
(Use when actual blow count is less than PDA blow count due to minimum tip elevation requirement. A plus sign (+) shall be placed after the PDA nominal axial compressive resistance value indicating actual value is higher than PDA value.)

This sheet to be completed by MoDOT construction personnel.

2			**SANDY LEAN CLAY (CL)**, with gravel, brown and gray, stiff to very stiff	45							

Stratification lines are approximate. In-situ, the transition may be gradual. Hammer Type: Automatic

Advancement Method:
0 to 20 feet: Hollow-Stem Augers
20 to 100 feet: Mud Rotary

Abandonment Method:
Boring backfilled with auger cuttings and surface capped with asphalt upon completion.

See Exploration and Testing Procedures for a description of field and laboratory procedures used and additional data (If any).

See Supporting Information for explanation of symbols and abbreviations.

Elevations were provided by others.

GUARDRAIL, PAVEMENT MARKING, AND REMOVALS SPECIAL SHEET 1 OF 1

ALL PROJECT COORDINATES HAVE BEEN PROJECTED FROM THE MISSOURI STATE PLANE COORDINATE (SPC) SYSTEM OF 1983 USING AN AVERAGE PROJECT PROJECTION (GRID TO GROUND) FACTOR. TO GET BACK TO STATE PLANE COORDINATES, MULTIPY THE PROJECT COORDINATES BY THE AVERAGE GRID FACTOR AS SHOWN IN THE "REFERENCE CONTROL INFORMATION" PORTION OF THIS TABLE.

PROJECT COORDINATE INFORMATION

COORDINATE SYSTEM	MODIFIED STATE PLANE (GROUND)
HORIZONTAL DATUM	NAD 83(2011) EPOCH 2010.0
VERTICAL DATUM	NAVD 88: GNSS DERIVED
GEOID MODEL	18
ELEVATIONS DETERMINED BY	DIFFERENTIAL LEVELING / GPS - MODOT VRS
PROJECT PROJECTION FACTOR	1.00010136

REFERENCE CONTROL INFORMATION

COORDINATE SYSTEM	MO COORDINATE SYSTEM OF 1983
CONTROL STATION	MISSOURI CORS
DESIGNATION	MODOT EDINA CORS ARP

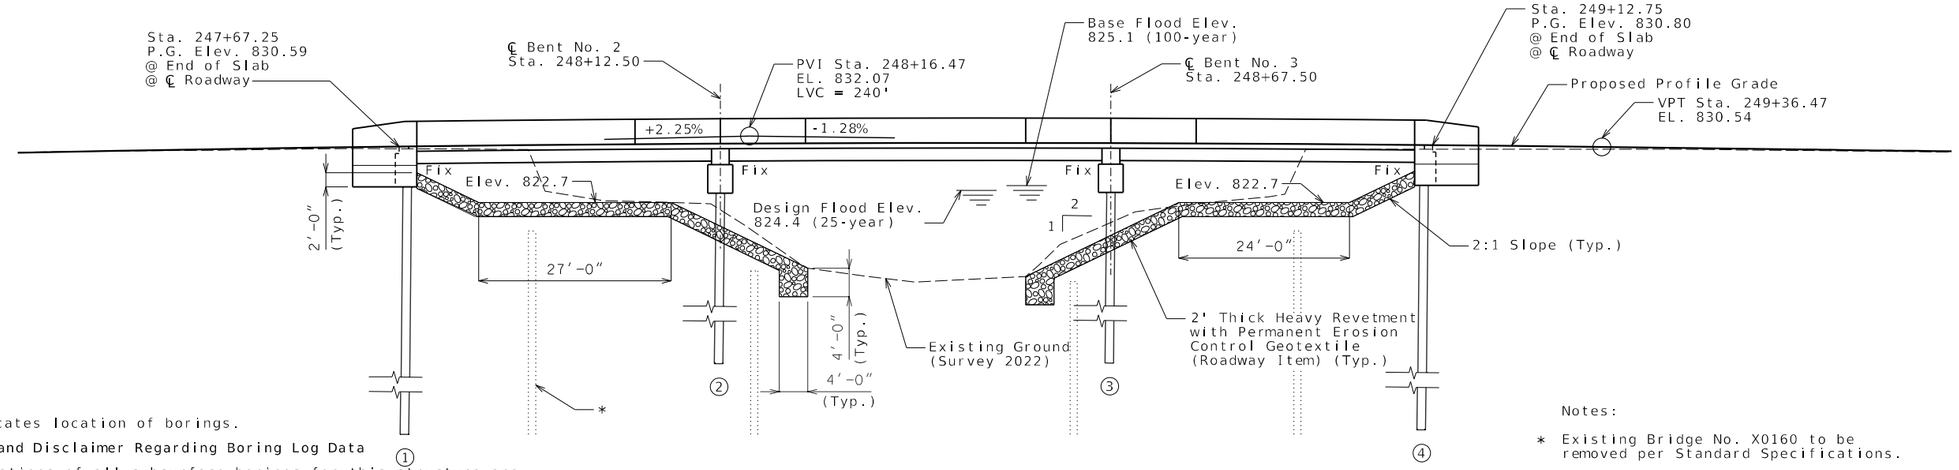
(44'-55'-44') SD-CL COMPOSITE WIDE FLANGE BEAM SPANS



GENERAL ELEVATION

⊕ Indicates location of borings.

Notice and Disclaimer Regarding Boring Log Data

The locations of all subsurface borings for this structure are shown on the plan sheet for this structure. The boring data for all locations indicated, as well as any other boring logs or other factual records of subsurface data and investigations performed by the department for the design of the project, are shown on Sheets No. 29 thru 33 and may be included in the Electronic Bridge Deliverables. They will also be available from the Project Contact upon written request. No greater significance or weight should be given to the boring data depicted on the plan sheets than is given to the subsurface data available from the district or elsewhere.

The Commission does not represent or warrant that any such boring data accurately depicts the conditions to be encountered in constructing this project. A contractor assumes all risks it may encounter in basing its bid prices, time or schedule of performance on the boring data depicted here or those available from the district, or on any other documentation not expressly warranted, which the contractor may obtain from the Commission.

Notes:

* Existing Bridge No. X0160 to be removed per Standard Specifications.

Roadway fill shall be completed to the final roadway section and up to the elevation of the bottom of the concrete beam within the limits of the structure and for not less than 25 feet in back of the fill face of the end bents before any piles are driven for any bents falling within the embankment section.

For General Notes, Location Sketch, Hydrologic Data, Foundation Data, Estimated Quantities and Estimated Quantities for Slab on Steel, see Sheet No. 2.

VEENSTRA & KIMM INC.
9788 N Ash Ave. Kansas City, Missouri 64157
816-781-6182 816-781-0643 (FAX)
Certificate of Authority No. 2002006347

General Notes:

Design Specifications:

2020 AASHTO LRFD Bridge Design Specifications (9th Ed.)

2011 AASHTO Guide Specifications for LRFD Seismic Bridge Design (2nd Ed.) and 2014 Interim Revisions (Seismic Details)

Seismic Design Category = A

Design earthquake response spectral acceleration coefficient at 1.0 second period, SD1 = 0.142 g

Acceleration Coefficient (effective peak ground acceleration coefficient), As = 0.084 g

Design Loading:

Vehicular = HL-93
Future Wearing Surface = 35 Lb./Sq. Ft.
Earth = 120 Lb./Cu. Ft.
Equivalent Fluid Pressure = 45 Lb./Cu. Ft.
Superstructure: Simply-Supported, Non-Composite for dead load.
Continuous Composite for live load.

Design Unit Stresses:

Class B Concrete (Substructure except Cast-in-Place Piles)	f'c = 3,000 psi
Class B-1 Concrete (Barrier & Cast-in-Place Piles)	f'c = 4,000 psi
Class B-2 Concrete (Superstructure, except Barrier)	f'c = 4,000 psi
Reinforcing Steel (ASTM A615 Grade 60)	fy = 60,000 psi
Structural Steel (ASTM A709 Grade 50)	fy = 50,000 psi
Welded or Seamless Steel Shell (pipe) for CIP Pile (ASTM 252 Modified Grade 3)	fy = 50,000 psi

Neoprene Pads:

Neoprene bearing pads shall be 60 durometer and shall be in accordance with Sec 716.

Fabricated Steel Connections:

Field connections shall be made with 3/4-inch diameter ASTM F3125 Grade 325 Type 1 bolts and 13/16-inch diameter holes, except as noted.

Joint Filler:

All joint filler shall be in accordance with Sec 1057 for preformed sponge rubber expansion and partition joint filler, except as noted.

Reinforcing Steel:

Minimum clearance to reinforcing steel shall be 1 1/2", unless otherwise shown.

Minimum clearance between galvanized piles and uncoated (plain) reinforcing steel including bar supports shall be 1 1/2". Nylon, PVC, or polyethylene spacers shall be used to maintain clearance. Nylon cable ties shall be used to bind the spacers to the reinforcement.

Traffic Handling:

Structure to be closed during construction.
Traffic to be maintained on other routes during construction.
See roadway plans for traffic control.

Miscellaneous:

High strength bolts, nuts and washers will be sampled for quality assurance as specified in Sec 106.

Estimated Quantities for Slab on Steel

Item		Total
Class B-2 Concrete	cu. yard	135
Reinforcing Steel (Epoxy Coated)	pound	36,470

Notes:

The table of Estimated Quantities for Slab on Steel represents the quantities used by the State in preparing the cost estimate for concrete slabs. The area of the concrete slab will be measured to the nearest square yard longitudinally from end of slab to end of slab and transversely from out to out of bridge slab (or with the horizontal dimensions as shown on the plan of slab). Payment for stay-in-place corrugated steel forms, conventionsal forms, all concrete, and epoxy coated reinforcing steel will be considered completely covered by the contract unit price for the slab. Variations may be encountered in the estimated quantities but the variations cannot be used for an adjustment in the contract unit price.

Method of forming the slab shall be as shown on the plans and in accordance with Sec 703. All hardware for forming the slab to be left in place as a permanent part of the structure shall be coated in accordance with ASTM A123 or ASTM B633 with a thickness class SC 4 and a finish type I, II or III.

Slab shall be cast-in-place with conventional forms or stay-in-place corrugated steel forms. Precast panels will not be permitted.

Bridge deck surface may be finished with a vibrating screed.

The contractor shall provide bracing necessary for lateral and torsional stability of the beams during construction of the concrete slab and remove the bracing after the slab has attained 75% design strength. Contractor shall not weld on or drill holes in the beams. The cost for furnishing, installing, and removing bracing will be considered completely covered by the contract unit price for Slab on Steel.

Estimated Quantities

Item		Substr.	Superstr.	Total
Class 1 Excavation	cu. yard	60		60
Removal of Bridges (X0160)	each			1
Bridge Approach Slab (Minor)	sq. yard		109	109
Galvanized Cast-in-Place Concrete Piles (14 in.)	linear foot	1183		1183
Galvanized Cast-in-Place Concrete Piles (24 in.)	linear foot	1158		1158
Dynamic Pile Testing	each	4		4
*Dynamic Pile Restrike Testing	each	4		4
Pile Point Reinforcement	each	26		26
Class B Concrete (Substructure)	cu. yard	54.8		54.8
Slab on Steel	sq. yard		431	431
Type D Barrier	linear foot		317	317
Reinforcing Steel (Bridges)	pound	4960		4960
Fabricated Structural Low Alloy Steel (I-Beam) A709, Grade 50	pound		64,370	64,370
Slab Drain	each		8	8
Galvanizing Structural Steel	lump sum			1
Vertical Drain at End Bents	each	2		2
Plain Neoprene Bearing Pad	each		8	8
Laminated Neoprene Bearing Pad	each		16	16

All concrete between the upper and lower construction joints in the end bents is included in the Estimated Quantities for Slab on Steel.

All reinforcement in the end bents and all reinforcement in cast-in-place pile at end bents is included in the Estimated Quantities for Slab on Steel.

All reinforcement in the intermediate bent concrete diaphragms except reinforcement embedded in the beam cap is included in the Estimated Quantities for Slab on Steel.

All concrete above the intermediate beam cap is included in the Estimated Quantities for Slab on Steel.

All reinforcement in cast-in-place pile at intermediate bent is included in the substructure quantities.

Structural steel shall be galvanized in accordance with ASTM A123 and Sec 1081.

Sheet metal in intermediate concrete diaphragms is subsidiary to Slab on Steel.

Foundation Data

Type	Design Data		Bent Number 1	2	3	4
Load Bearing Pile	Pile Type and Size		CECIP 14"	CECIP 24"	CECIP 24"	CECIP 14"
	Number	ea	7	6	6	7
	Approximate Length Per Each	ft	82	94	99	87
	Pile Point Reinforcement	ea	ALL	ALL	ALL	ALL
	Min. Galvanized Penetration (Elev.)	ft	804.0	799.0	799.0	805.0
	Est. Max. Scour Depth 500 (Elev.)	ft	--	812.6	812.6	--
	Minimum Tip Penetration (Elev.)	ft	804.0	790.0	792.0	805.0
	Criteria for Min. Tip Penetration		Min. Embed	(1)	Min. Embed	Min. Embed
	Pile Driving Verification Method		DT	DT	DT	DT
	Minimum Nominal Axial Compressive Resistance (MNACR)	kip	127	259	259	127
	Portion of MNACR Required at End of Initial Drive	kip	89(70%)	181(70%)	181(70%)	89(70%)
	Resistance Factor		0.65	0.65	0.65	0.65

Minimum Nominal Axial Compressive Resistance = $\frac{\text{Maximum Factored Loads}}{\text{Resistance Factor}}$

DT = Dynamic Testing

Dynamic Testing shall be performed on the first pile installed at each bent.

The test piles at End Bents No. 1 and 4 shall be driven to an end-of-initial drive resistance of approximately 89 kips, which is estimated to occur at a pile tip elevation of approximately 766 and 760 respectively. The test piles at intermediate Bents No. 2 and 3 shall be driven to an end-of-initial drive resistance of approximately 181 kips, which is estimated to occur at a pile tip elevation of approximately 752 and 746 respectively. Subsequently, pile setups and the minimum nominal axial compressive resistance shall be confirmed by a restrike test perfomed not less than 24 hours after end of initial drive.

Pile point reinforcement need not be galvanized. Shop drawings will not be required for pile point reinforcement.

Estimated Maximum Scour Depth (Elevation) shown is for verifying Minimum Nominal Axial Compressive Resistance using dynamic testing only where pile resistance contribution above this Elevation shall not be considered.

All piling shall be galvanized down to the minimum galvanized penetration (elevation).

The contractor shall make every effort to achieve the minimum galvanized penetration (elevation) shown on the plans for all piles. Deviations in penetration less than 5 feet of the minimum will be considered acceptable provided the contractor makes the necessary corrections to ensure the minimum penetration is achieved on subsequent piles.

Piles are located within the Heavy Revetment on spill slopes.

List of Drawings

Hydrologic Data

Drainage Area = 42 mi²
Design Flood Frequency = 25 years
Design Flood Discharge = 6600 cfs
Design Flood (D.F.) Elevation = 824.4
Base Flood (100-year)
Base Flood Elevation = 825.1
Base Flood Discharge = 9000 cfs
Estimated Backwater = 0.0 ft
Average Velocity thru Opening = 0.5 ft/s
Freeboard (50-year)
Freeboard = 3.4 ft
Roadway Overtopping
Overtopping Flood Discharge = 814 cfs
Overtopping Flood Frequency = 1 year
500-year Flood Elevation = 821.9

*This work will be performed at the discretion of the engineer and will be underrun if not required by the engineer.

(1) Criteria for Min. Tip Penetration:
Penetration required for organic geotechnical layer.

Lower Stirrup Bars	5-#4-P101	7-#4-P201	7-#4-P301	5-#4-P401

Notes:

Welded or seamless steel shell (pipe) shall be ASTM A252 Modified Grade 3 (fy = 50,000 psi) with physical and chemical requirements that meet ASTM A572 Grade 50. Pile certification and source material shall be required.

Concrete for cast-in-place pile shall be Class B-1.

Steel casting for conical pile point reinforcement shall be ASTM A148 Grade 90-60.

The minimum wall thickness of any spot or local area of any type shall not be more than 12.5% under the specified nominal wall thickness.

The contractor shall determine the pile wall thickness required to avoid damage from all driving activities, but wall thickness shall not be less than the minimum specified. No additional payment will be made for furnishing a thicker pile wall than specified on the plans.

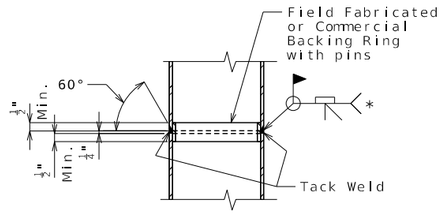
Splices of pipe for cast-in-place concrete pile shall be made watertight and to the full strength of the pipe above and below the splice to permit hard driving without damage. Pipe damaged during driving shall be replaced without cost to the state. Pipe sections used for splicing shall be at least 5 feet in length.

At the Contractors option, the hooks of vertical bars embedded in the beam cap may be oriented inward or outward.

Reinforcing steel for cast-in-place piles is included in the Bill of Reinforcing Steel.

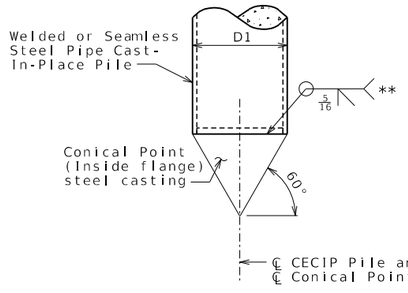
All reinforcement for cast-in-place pile is included in the estimated quantities for bents.

For Foundation Data table, see Sheet No. 2.



STEEL PIPE PILE SPLICE

* Galvanizing material shall be omitted or removed one inch clear of weld locations in accordance with Sec 702.



MANUFACTURED CONICAL PILE POINT

(Omit closure plate)

** If the conical pile point is not pre-beveled, place a 3/8" bevel at 40 degrees on the pipe.

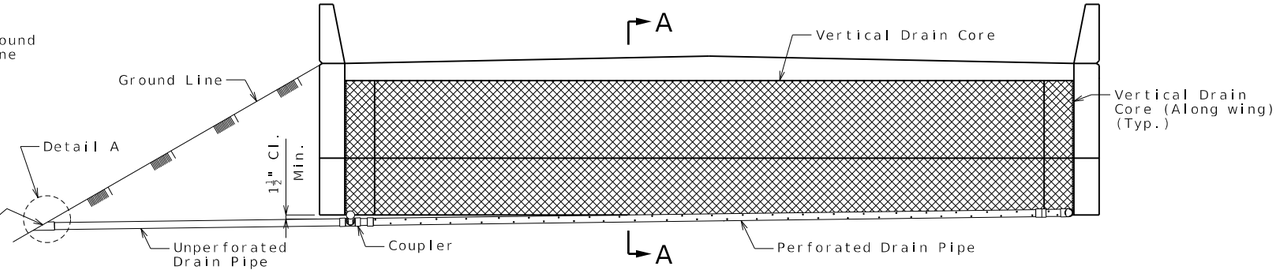
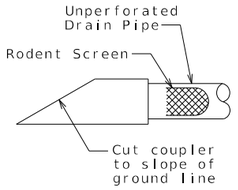
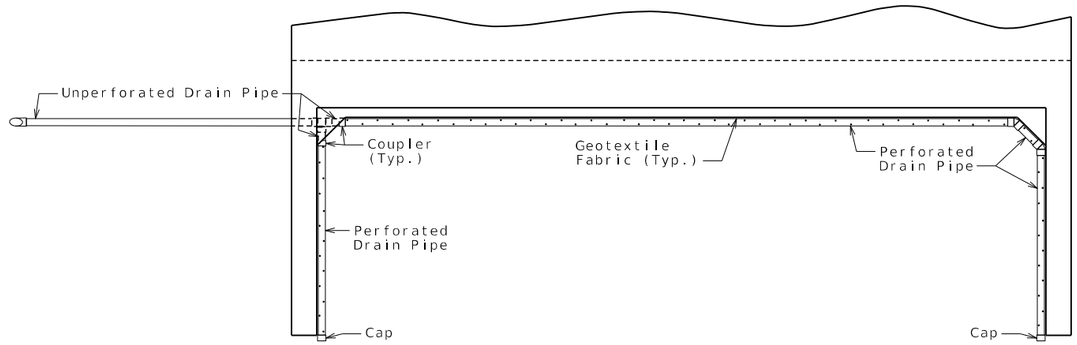
ELEVATION OF WING



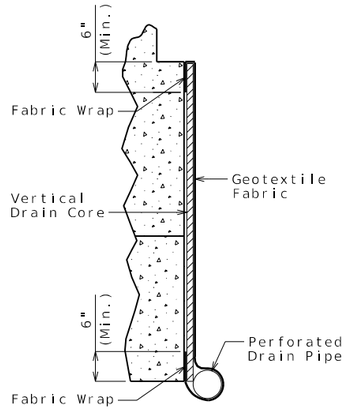
ELEVATION OF END BENT



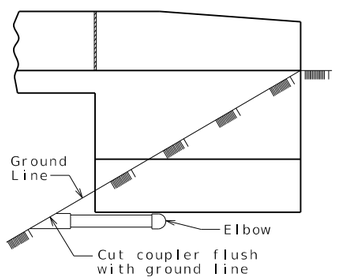
DETAIL A



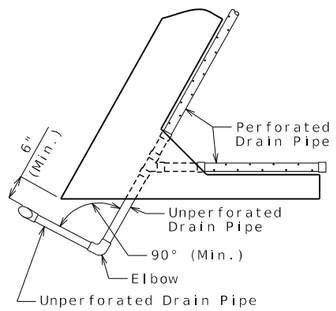
PLAN OF END BENT



PART SECTION A-A
(Section thru wing similar)



ELEVATION OF WING



PART PLAN

OPTIONAL TURNED DRAIN
(Use only when straight drain is not practical.)

General Notes:

All drain pipe shall be sloped 1 to 2 percent.

Drain pipe may be either 6-inch diameter corrugated metallic-coated steel pipe underdrain, 4-inch diameter corrugated polyvinyl chloride (PVC) drain pipe, or 4-inch diameter corrugated polyethylene (PE) drain pipe.

Drain pipe shall be placed at fill face of end bent and inside face of wings. The pipe shall slope to lowest grade of ground line, also missing the lower beam of end bent by a minimum of 1 1/2 inches.

Perforated pipe shall be placed at fill face side and inside face of wings at the bottom of end bent and plain pipe shall be used where the vertical drain ends to the exit at ground line.

VERTICAL DRAIN AT END BENTS

(Squared end bent shown, skewed end bent similar)

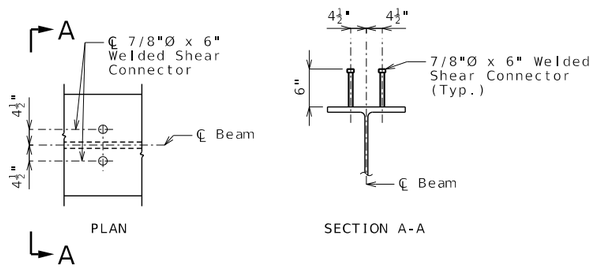
INTERMEDIATE DIAPHRAGM

NOTES:

All bolted connections shall be 3/4"Ø ASTM F3125 Grade A325 Type 1 bolts in 13/16" Ø holes.

At the contractor's option, holes in the diaphragm plate of non slab bearing diaphragms may be made 3/16" larger than the nominal diameter of the bolt. A hardened washer shall be used under the bolt head and nut when this option is used. Holes in the girder diaphragm connection plate or transverse web stiffener shall be standard size.

All structural steel shall be ASTM A709 Grade 50 and shall be galvanized in accordance with A123 and Sec 1080. Weight of all structural steel is included in the weight of Fabricated Structural Low Alloy Steel (I-Beam) A709, Grade 50.



DETAILS OF SHEAR CONNECTORS

Weight of 980 pounds of shear connectors for the beams is included in the weight of Fabricated Structural Low Alloy Steel (I-Beam) A709, Grade 50. Shear connectors shall be in accordance with Sec 712, 1037, and 1080.

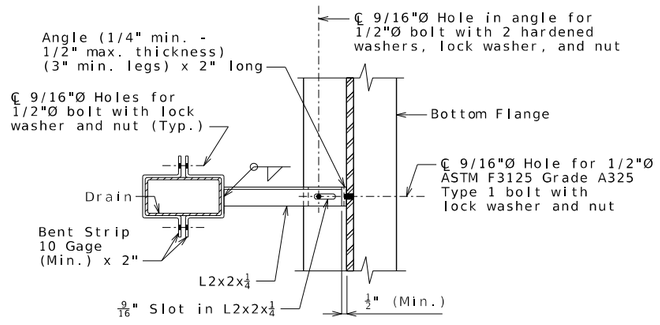
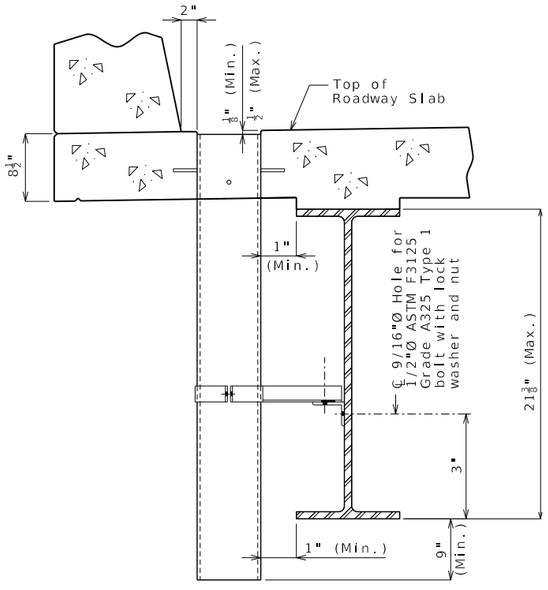
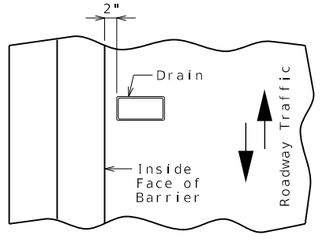
PLAN OF SLAB SHOWING SLAB DRAIN LOCATIONS



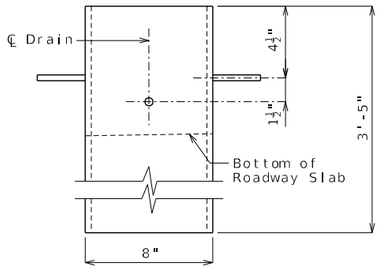
PART SECTION SHOWING BRACKET ASSEMBLY



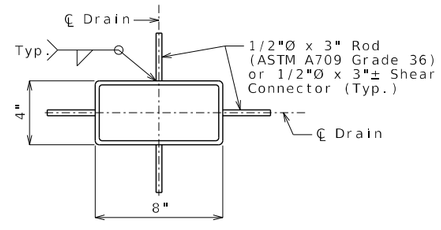
PART SECTION NEAR DRAIN



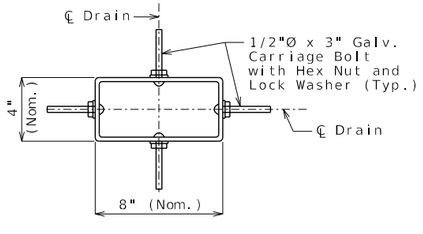
PART PLAN OF SLAB AT DRAIN



ELEVATION OF DRAIN



PLAN OF STEEL DRAIN OPTION



PLAN OF FRP DRAIN OPTION

General Notes:

Contractor shall have the option to construct either steel or FRP slab drains. All drains shall be of same type.

Slab drain bracket assembly shall be ASTM A709 Grade 36 steel.

Locate drains in slab by dimensions shown in Part Section Near Drain.

Reinforcing steel shall be shifted to clear drains.

The bracket assembly shall be galvanized in accordance with ASTM A123.

All bolts, hardened washers, lock washers and nuts shall be galvanized in accordance with AASHTO M 232 (ASTM A153), Class C.

All 1/2-inch diameter bolts shall be ASTM A307, except as shown.

Shop drawings will not be required for the slab drains and the bracket assembly.

The bolt hole for the bracket assembly attachment shall be located on the wide flange beam shop drawings.

Notes for Steel Drain:

Slab drains may be fabricated of either 1/4-inch welded sheets of ASTM A709 Grade 36 steel or from 1/4-inch structural steel tubing ASTM A500 or A501.

Outside dimensions of drains are 8" x 4".

The drains shall be galvanized in accordance with ASTM A123.

Notes for FRP Drain:

Drains shall be machine filament-wound thermosetting resin tubing meeting the requirements of ASTM D2996 with the following exceptions:

Shape of drains shall be rectangular with outside nominal dimensions of 8" x 4".

Minimum reinforced wall thickness shall be 1/4 inch.

The resin used shall be ultraviolet (UV) resistant and/or have UV inhibitors mixed throughout. Drains may have an exterior coating for additional UV resistance.

The color of the slab drain shall be gray (Federal Standard 26373). The color shall be uniform throughout the resin and any coating used.

The combination of materials used in the manufacture of the drains shall be tested for UV resistance in accordance with ASTM D4329 Cycle A. The representative material shall withstand at least 500 hours of testing with only minor discoloration and without any physical deterioration. The contractor shall furnish the results of the required ultraviolet testing prior to acceptance of the slab drains.

At the contractor's option, drains may be field cut. The method of cutting FRP slab drain shall be as recommended by the manufacturer to ensure a smooth, chip free cut.

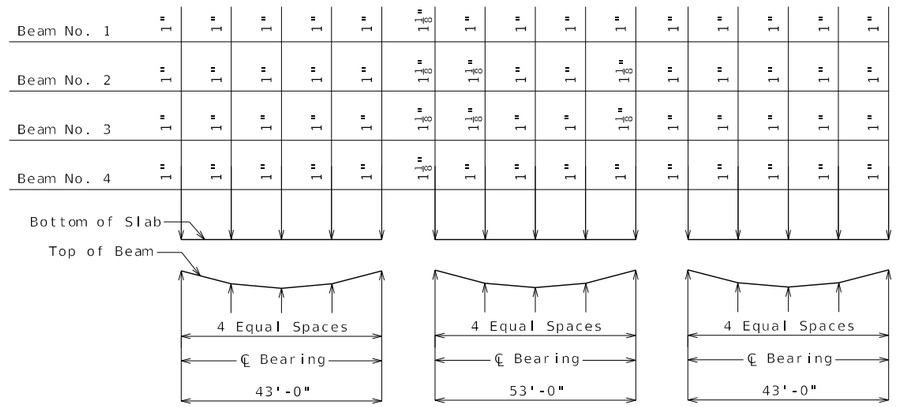
SLAB DRAINS

Detailed Jul. 2024
Checked Jul. 2024

Note: This drawing is not to scale. Follow dimensions.

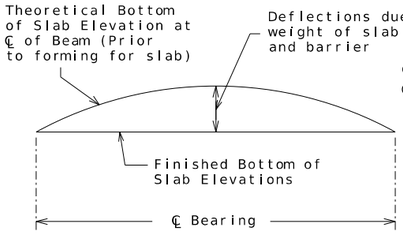


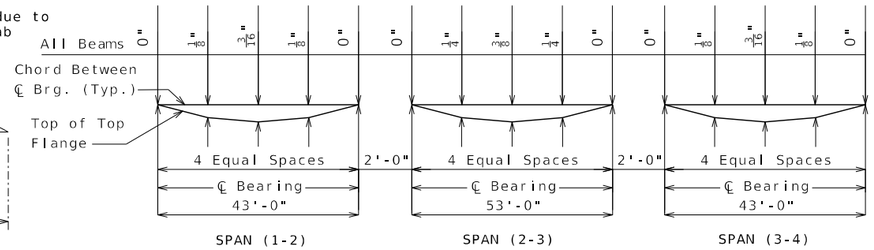
Haunching is estimated based on grade and bent elevations and Dead Load Deflection shown. If elevations or deflections in the field vary, an adjustment of the slab haunches shall be necessary in order to maintain a constant 8 1/2" slab thickness.

Theoretical Bottom of Slab Elevations at Centerline of Beam (Prior to forming for slab)

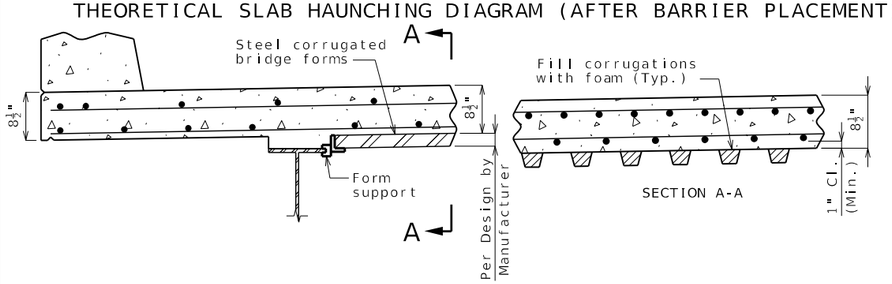
Beam Number	Span (1-2) (43'-0" ℄ Brg. - ℄ Brg.)					Span (2-3) (53'-0" ℄ Brg. - ℄ Brg.)					Span (3-4) (43'-0" ℄ Brg. - ℄ Brg.)				
	℄ Brg.	.25	.50	.75	℄ Brg.	℄ Brg.	.25	.50	.75	℄ Brg.	℄ Brg.	.25	.50	.75	℄ Brg.
1	829.70	829.88	830.01	830.07	830.07	830.08	830.28	830.36	830.31	830.16	830.15	830.17	830.15	830.05	829.89
2	829.83	830.02	830.14	830.20	830.21	830.22	830.22	830.50	830.45	830.29	830.29	830.31	830.28	830.19	830.03
3	829.83	830.02	830.14	830.20	830.21	830.22	830.22	830.50	830.45	830.29	830.29	830.31	830.28	830.19	830.03
4	829.70	829.88	830.01	830.07	830.07	830.08	830.28	830.36	830.31	830.16	830.15	830.17	830.15	830.05	829.89

Elevations are based on a constant slab thickness of 8 1/2" and include allowance for theoretical dead load deflections due to weight of slab (including corrugated steel form) and barrier.





THEORETICAL SLAB HAUNCHING DIAGRAM (AFTER BARRIER PLACEMENT)



OPTIONAL STAY-IN-PLACE FORM DETAILS

	Sequence of Pours					Min. Rate of Pour Cu. Yds./Hr.	
	Direction					With Retarder	No Retarder
Basic Sequence	1	2	3	4	5	25	25
	Either Direction						
Alternate pours to the basic skip sequence are subject to the approval of the engineer in accordance with Sec 703.							
Alternate A Pours	1		5 + 2		4 + 3	25	25
	End to 5		1 to 4		2 to End		
Alternate B Pours	1 + 5 + 2			4 + 3		25	25
	End to 4			2 to End			
Alternate C Pours	1 + 5 + 2 + 4 + 3					25	25
	End to End						

The contractor shall pour and satisfactorily finish the slab pours at the rate given. Retarder, if used, shall be an approved type and retard the set of concrete to 2.5 hours.

The concrete diaphragm below the construction joint shall be poured a minimum of 12 hours before the slab is poured.

SLAB POURING SEQUENCE

TYPICAL SLAB ELEVATIONS DIAGRAM

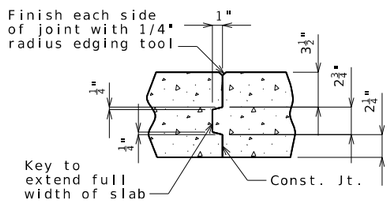
Stay-In-Place Forms:

Corrugated steel forms, supports, closure elements and accessories shall be in accordance with grade requirement and coating designation G165 of ASTM A653. Complete shop drawings of the permanent steel deck forms shall be required in accordance with Sec 1080.

Corrugations of stay-in-place forms shall be filled with an expanded polystyrene material. The polystyrene material shall be placed in the forms with an adhesive in accordance with the manufacturer's recommendations.

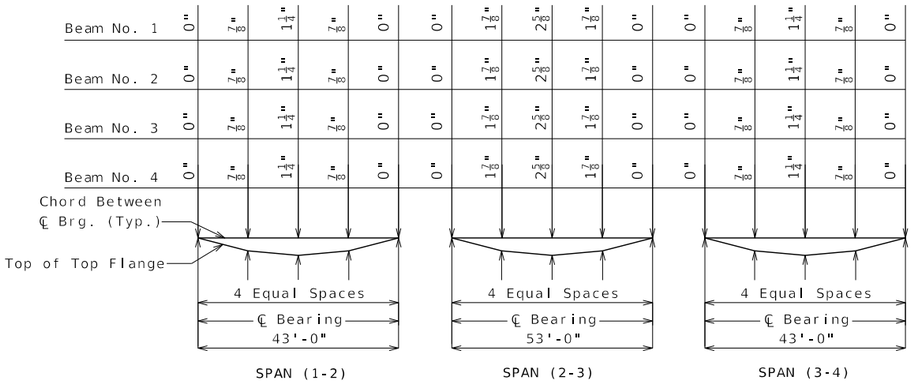
Form sheets shall not rest directly on the top of beam. Sheets shall be securely fastened to form supports with a minimum bearing length of one inch on each end. Form supports shall be placed in direct contact with the top of beam. Welding on or drilling holes in the beam will not be permitted. All steel fabrication and construction shall be in accordance with Sec 1080 and 712. Certified field welders will not be required for welding of the form supports.

The design of stay-in-place corrugated steel forms is per manufacturer which shall be in accordance with Sec 703 for false work and forms. Maximum actual weight of corrugated steel forms allowed shall be 4 psf assumed for beam loading.



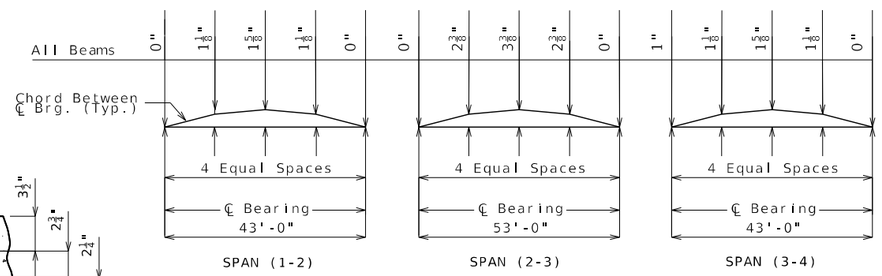
SLAB CONSTRUCTION JOINT

STEEL DEFLECTION



TOTAL DEAD LOAD DEFLECTION

Dead load deflection includes weight of structural steel, concrete slab, and barrier. Approximately 12% of dead load deflection is due to the weight of structural steel.



WIDE FLANGE BEAMS CAMBER DIAGRAM

Camber includes allowance for vertical curve, and dead load deflection due to concrete slab, barrier, and structural steel.

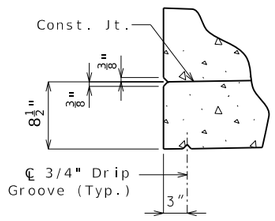
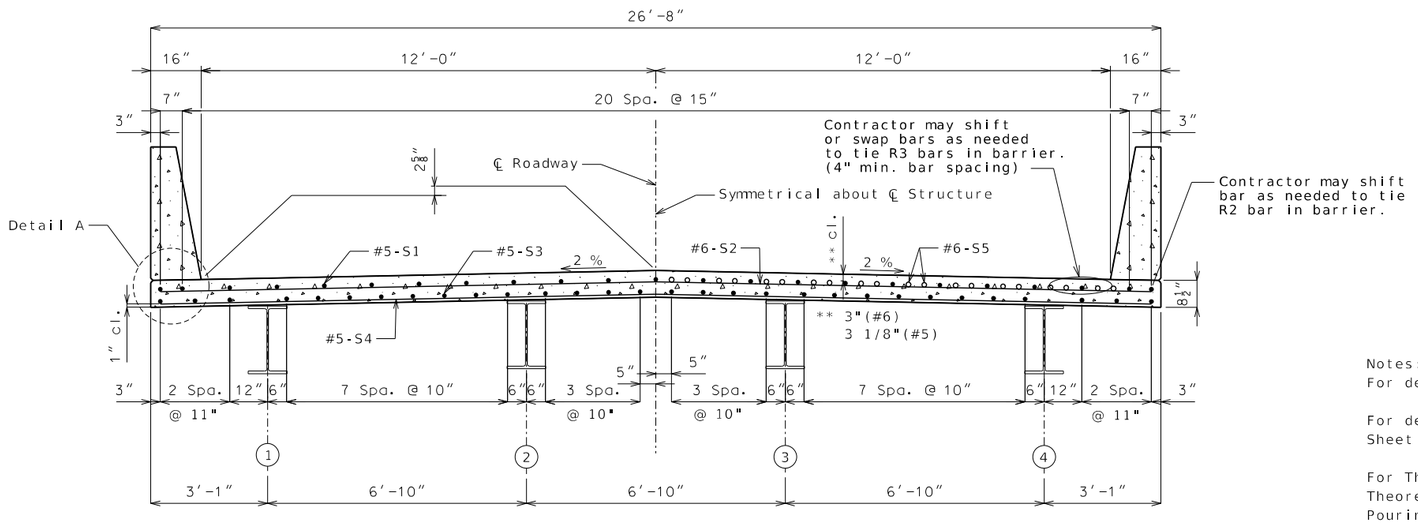
PLAN OF SLAB SHOWING REINFORCEMENT



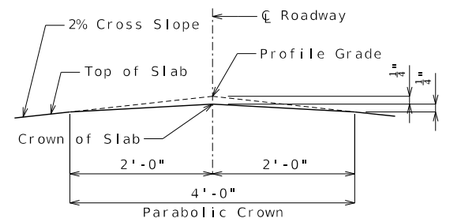
DETAIL A



HALF SECTION NEAR MID SPAN

HALF SECTION NEAR INTERMEDIATE BENT

SECTION THRU SLAB



PARABOLIC CROWN

Notes:
For details of barrier, see Sheets No. 22 & 23.

For details and locations of slab drains, see Sheet No. 19.

For Theoretical Bottom of Slab Elevations, Theoretical Slab Hauncing Diagram, and Slab Pouring Sequence, see Sheet No. 20.

Longitudinal slab dimensions are measured horizontally.

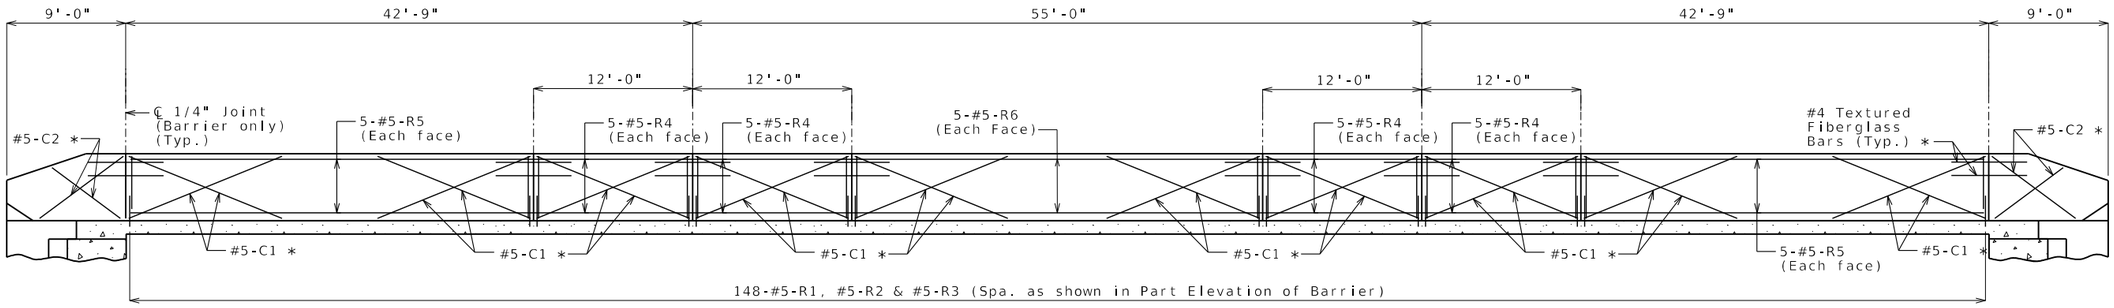
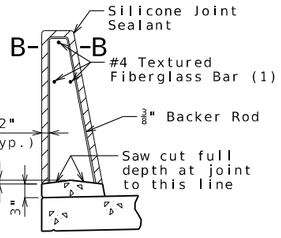
Detailed Sep. 2024
Checked Sep. 2024

Note: This drawing is not to scale. Follow dimensions.

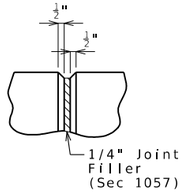


ELEVATION OF BARRIER

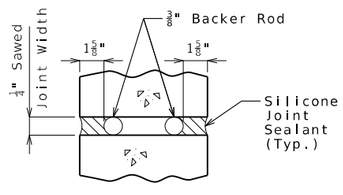
(Left barrier shown, right barrier similar)
Longitudinal dimensions are horizontal.



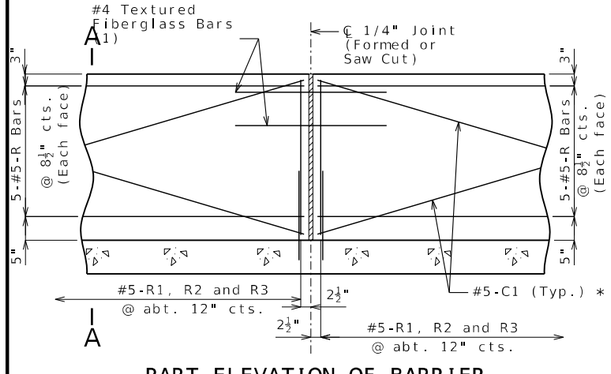
SECTION THRU
SAW CUT JOINT



PART ELEVATION
AT FORMED JOINT

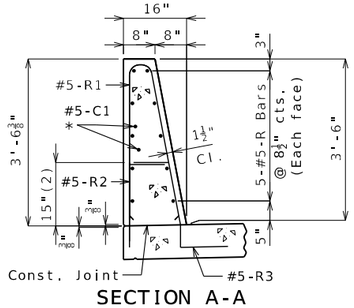


SECTION B-B



PART ELEVATION OF BARRIER

(1) Four feet long, centered on joint, slip-formed option only

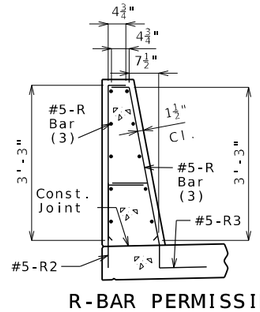


SECTION A-A

Use a minimum lap of 3'-1" for #5 horizontal barrier bars.

The cross-sectional area above the slab is 3.52 square feet.

(2) To top of bar



R-BAR PERMISSIBLE ALTERNATE SHAPE

(3) The R1 bar may be separated into two bars as shown, at the contractor's option, only when slip forming is not used. (All dimensions are out to out.)

General Notes:

* Slip-formed option only.

Conventional forming or slip forming may be used. Saw cut joints may be used with conventional forming.

Top of barrier shall be built parallel to grade and barrier joints (except at end bents) normal to grade.

All exposed edges of barrier shall have either a 1/2-inch radius or a 3/8-inch bevel, unless otherwise noted.

Payment for all concrete and reinforcement, complete in place, will be considered completely covered by the contract unit price for Type D Barrier per linear foot.

Concrete in barrier shall be Class B-1.

Measurement of barrier is to the nearest linear foot for each structure, measured along the outside top of slab from end of wing to end of wing.

Concrete traffic barrier delineators shall be placed on top of the barrier as shown on Missouri Standard Plan 617.10 and in accordance with Sec 617. Delineators on bridges with two-lane, two-way traffic shall have retroreflective sheeting on both sides. Concrete traffic barrier delineators will be considered completely covered by the contract unit price for Type D Barrier.

Joint sealant and backer rods shall be in accordance with Sec 717 for silicone joint sealant for saw cut and formed joints.

For slip-formed option, both sides of barrier shall have a vertically broomed finish and the top shall have a transversely broomed finish.

TYPE D BARRIER

PLAN

* Transition to zero at Type A curb for gutter lines to match.

DETAILS OF GUARD RAIL ATTACHMENT

(1) 5-#5-K1 @ 4" cts.

(2) 2 spaces @ 4"

(3) 5-#5-K4 & K5

(4) 3-#5-K6 & K7

(5) 3-#5-K13 or K15 @ 4½" cts., each face

(6) 3 spaces @ 3 13/16"

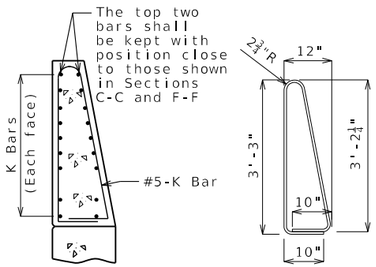
(7) Spaced as shown, each face

(8) To top of bar

General Notes:

Concrete traffic barrier delineators shall be placed on top of the barrier as shown on Missouri Standard Plan 617.10 and in accordance with Sec 617. Delineators on bridges with two-lane, two-way traffic shall have retroreflective sheeting on both sides. Concrete traffic barrier delineators will be considered completely covered by the contract unit price for Type D Barrier.

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 1 1/2" except as shown for bars embedded into end bent.



K10-K11 BAR PERMISSIBLE ALTERNATE SHAPE

(Other K bars not shown for clarity)

The K10-K11 bar combination may be furnished as one bar as shown, at the contractor's option.

All dimensions are out to out.

TYPE D BARRIER AT END BENTS

(Left barrier shown, right barrier similar)

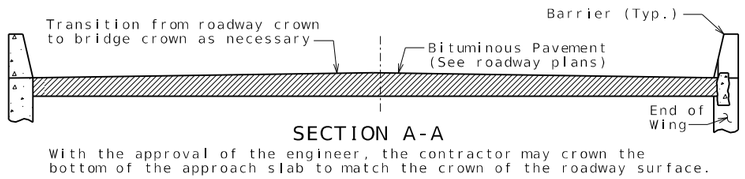
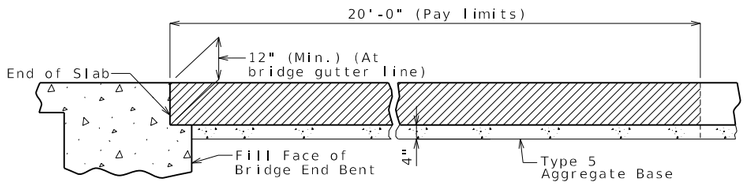
PART PLAN
(Squared structure shown, skewed structure similar)

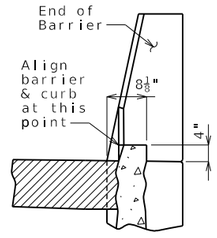


SECTION A-A

With the approval of the engineer, the contractor may crown the bottom of the approach slab to match the crown of the roadway surface.



SECTION B-B



4" TYPE S CURB

See Missouri Standard Plan 609.00 for details of Type S curb.

General Notes:

Contractor shall construct the asphalt slab. The concrete slab is not allowed.

The contractor shall pour and satisfactorily finish the bridge slab before placing the bridge approach slab.

Notes For Asphalt Slab Only:

Payment for furnishing all materials, labor and excavation necessary to construct the asphalt bridge approach slab, including tack, curb, and Type 5 aggregate base within the pay limits shown, complete in place, will be considered completely covered by the contract unit price for Bridge Approach Slab (Minor) per square yard.

Application of tack is required between lifts per Sec 403.

ASPHALT SLAB

Nominal lengths are based on out to out dimensions shown in bending diagrams and are listed to the nearest inch for fabricator's use. Actual lengths are measured along centerline bar to the nearest inch. Weights are based on actual lengths.

For bending diagrams and steel reinforcing totals, see Sheet No. 25.

All bars shall be Grade 60.

Codes: C = Required coatings, where E = Epoxy Coated and G = Galvanized.

SH = Required shape, see bending diagrams.

V = Sets of varied bars and number of bars of each length. Bar dimensions vary in equal increments between dimensions shown on this line and the following line and the actual length dimension shown on this line and the following line vary by the specified increment.

Nominal lengths are based on out to out dimensions shown in bending diagrams and are listed to the nearest inch for fabricator's use. Actual lengths are measured along centerline bar to the nearest inch. Weights are based on actual lengths.

For bending diagrams and steel reinforcing totals, see Sheet No. 25.

All bars shall be Grade 60.

Codes: C = Required coatings, where E = Epoxy Coated and G = Galvanized.

SH = Required shape, see bending diagrams.

V = Sets of varied bars and number of bars of each length. Bar dimensions vary in equal increments between dimensions shown on this line and the following line and the actual length dimension shown on this line and the following line vary by the specified increment.
