

TRAFFIC SHIFT TO BEGIN EVENING OF TUESDAY, SEPT. 29

In the event of inclement weather, this will be rescheduled when conditions allow.

Motorists can expect to see the following work during the continuous, 36-hour operation:

- Southbound traffic will be transitioned onto the newly constructed southbound lanes just south of the U.S. 160 intersection and then return back to existing U.S. 67 by use of a crossover located between County Road 352 and Route MM.
- Once southbound traffic is transitioned to the new lanes, EXISTING U.S. 67 within the same limits will be converted to one lane, no passing for NORTHBOUND travel ONLY!
- Once the pavement connection from the newly constructed northbound lanes to existing U.S. 67 is complete, then northbound traffic will transition to the new northbound lanes.
- Once northbound traffic is on the new lanes, existing U.S. 67 from County Road 352 to the end of Hawkeye Lane will then become the East Outer Road. For a short time, the East Outer Road will be closed between the southern end of Hawkeye Lane until construction crews complete a temporary connection of the East Outer Road. The East Outer Road will return to bidirectional traffic conditions except for a small section to be controlled by temporary signals while crews complete the permanent connection of the East Outer Road.

About

This portion of the project includes transitioning traffic to the new four-lane facility between U.S. 160 and Route MM. Information is also available on the project webpage at modot.org/FutureI57.

Please note all dates are weather permitting.

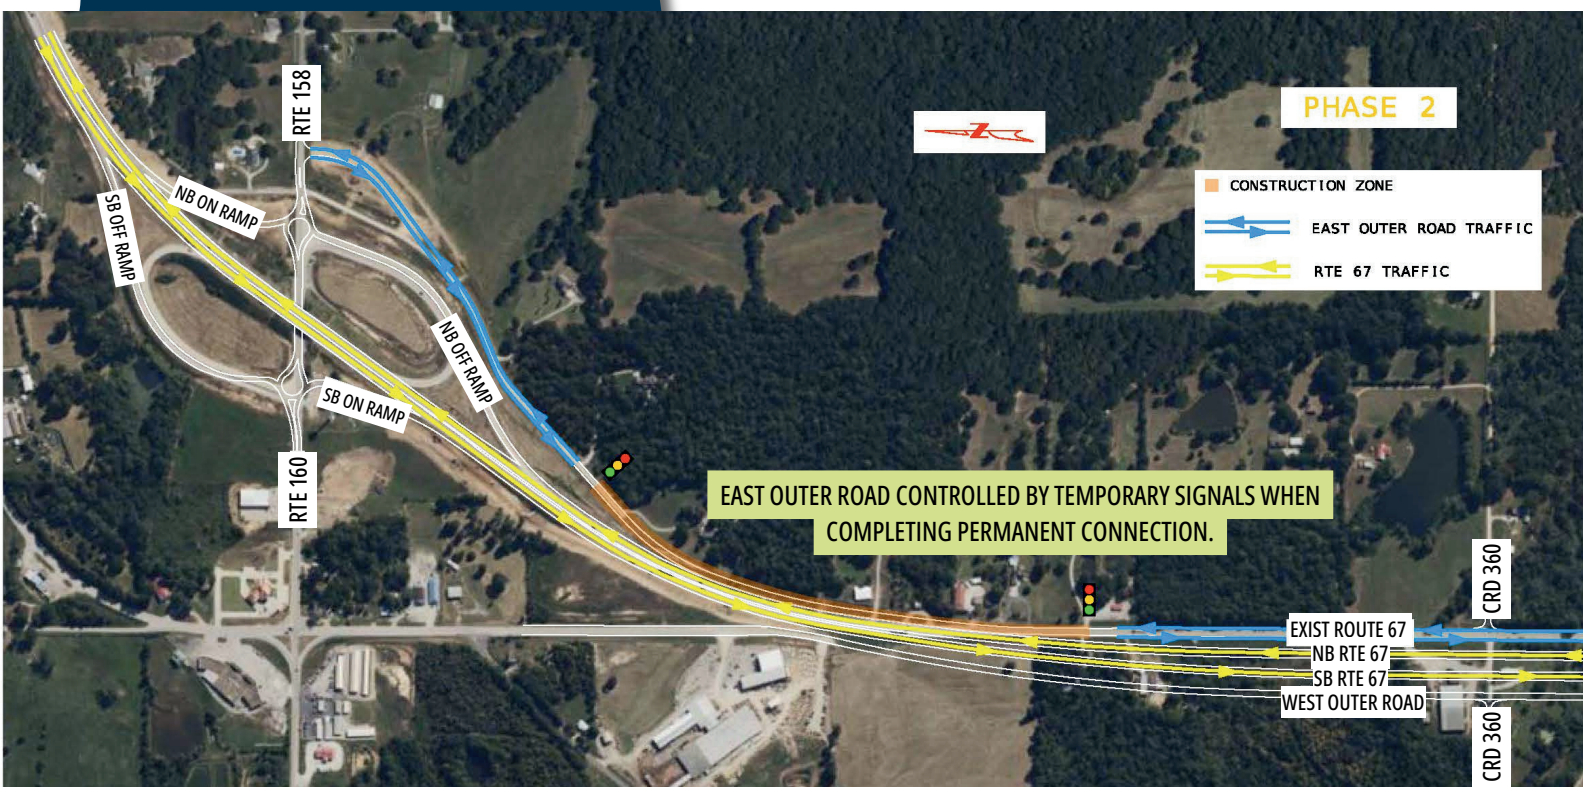

Phase 1 North

Phase 1 South

Phase 2 North

Phase 2 South
